This utility will walk you through creating a package.json file.

It only covers the most common items, and tries to guess sensible defaults.

See `npm help init` for definitive documentation on these fields
and exactly what they do.

Use `npm install <pkg>` afterwards to install a package and
save it as a dependency in the package.json file.

Press ^C at any time to quit.

package name: (todolist-v1)

version: (1.0.0)

description:

entry point: (app.js)

test command:

git repository:

keywords:

author:

license: (ISC)

About to write to /Users/nicole/code/webdev_udemy/todoList-v1/package.json:

```
{
  "name": "todolist-v1",
  "version": "1.0.0",
  "description": "",
  "main": "app.js",
  "scripts": {
    "test": "echo \"Error: no test specified\" && exit 1"
  },
  "author": "",
  "license": "ISC"
}
```

Is this OK? (yes) yes

npm notice

npm notice New minor version of npm available! 8.9.0 -> 8.15.0

npm notice Changelog: <https://github.com/npm/cli/releases/tag/v8.15.0>

npm notice Run npm install -g npm@8.15.0 to update!
